RESEARCH SUPPORT

Grant Awards:

1. Ongoing Research Projects

- a. **National Institute of Health, National Institute on Drug Abuse(NIDA) –1-R01-DA04498-01**
7/1/2017– 6/30/2020 (Principal Investigator)

Project Title: Role of extracellular vesicles in HIV neuropathogenesis and Opiate abuse. Investigate in the context of cART and opiates, the impact of microglia-derived extracellular vesicles(EVs) on neurons in order to understand the mechanism(s) that underlie HIV-induced neurocognitive impairment/HAND during aviremia. Additionally, a cross-sectional study comparing cerebral spinal fluid(CSF) exNef in people living with HIV/AIDS

(PLWHAs) on cART with a history/current opiate use to their degree of neurocognitive impairment/HAND will be performed. Findings from this proposal will demonstrate the role of EVs in the neuropathogenesis induced by the interplay of opiates and HIV in the CNS.

b. AIDS Clinical Trial Group (Biorepository) Research Grant

12/1/2017 – 12/31/2018 (Principal Investigator)

Project Title: Development of circulating exosomes as theranostics of neurodisease progression in aviremic HIV+. Grant proposal seeks to define a clinical correlate for the exosome proteomic cargo signature and HIV-induced neurocognitive impairment during cART and the potential development of Nef+ exosomes as both an indicator/diagnostic of neurocognitive status in aviremic HIV-infected individuals and novel therapeutic target.

c. The Miami Center for AIDS Research (CFAR) at the University of Miami Miller School of Medicine

9/ 2015 – 6/2017 (Principal Investigator)

Project Title: Nef+ exosomes: Neurotoxin, biomarker, and theranostic of neurocognitive status in HIV disease. Pilot grant examines exNef-mediated effects on primary neurons, cART influence on the incorporation of Nef into exosomes released glia cells infected with HIV, and studies whether exNef is a biomarker for neurocognitive changes in aviremic HIV+ individuals.

2. Completed Research Support

a. Mount Sinai Summer Institute for NeuroAIDS Disparities (MSINaD) Scholar Grant

6/2014 - 8/2016 (Principal Investigator)

Project title: Identification by targeted exome capture of immunogenetic variations in anti-viral pattern recognition receptors that predispose African-Americans to HIV infection and neuroAIDS. The proposal describes identified genetic variations in innate immune receptors associated with anti-viral immunity in African-Americans (AAs) that impact functional antiviral immune responses. Results from this study may indicate that genetic variation in innate immune receptors of AAs impair anti-viral immune responses thereby explaining the disparity of HIV infections among those of African ancestry in the United States.

b. Herbert Wertheim College of Medicine Pilot grant

1/2015 - 12/2016 (Principal Investigator)

Project Title: Exosome incorporation of HIV-1 Nef antigen and drug metabolizing enzymes as biomarkers of HIV disease progression in aviremic cocaine-abusers.

Pilot grant proposal examines cocaine influences on the incorporation of HIV antigens and UGTs* into exosomes released from cells latently infected with HIV and modulates responsiveness to SAHA therapy in aviremic HIV + cocaine abusers on HAART. We hypothesize HIV+ individuals who abused or currently use cocaine will have increased latent viral reservoirs in the CNS (and periphery), have higher levels of HIV antigens in CNS- or plasma-derived exosomes, and reduced responses to SAHA. *UGTs = UDPglucuronyltransferases.

c. Grant # 3R01DA027049-04S1 (Minority Supplement)

9/2012 - 9/2014 Raymond, A.D. (Principal Investigator)

Project Title: Poly drug nanocarrier to treat opiate addiction and HIV disease. This is a supplemental grant to foster minority faculty in research institutions. Examined the effect of HIV infection on exosome protein content and function in the presence of heroin and the feasibility to treat opiate addiction and HIV-induced disease with anti-viral/anti-mu receptor nanocarriers.

d. G12 R03034 NIH/NCRR/RCMI

3/2008 - 5/2010 (Co-investigator)

Sub-project: AIDS Infrastructure and Research Development.

The main goal of this project is to foster development of a major area of research at Morehouse School of Medicine which crosses basic science and clinical disciplines. Primary objectives of this research project are to study the effects of Nef+ exosomes.

I George McLean would like to be considered for appointment to one of the following citizens advisory boards for the City of Miramar: (1) Economic Development Advisory Board, (2) Planning & Zoning Board, (3) Historic Miramar Advisory Board. My professional and educational experience provides me the capacity to add value to the City of Miramar by contributing my treasures to the appointed board irrespectively, to facilitate informed and researched based decision-making. I would like to formally thank you for your consideration concerning volunteering in the City of Miramar.

Please review the attached resume, and feel free to contact me by email or phone, if you have any additional questions or concerns.

RESEARCH SUPPORT

Grant Awards:

1. Ongoing Research Projects

- a. National Institute of Health, National Institute on Drug Abuse(NIDA) –1-R01-DA04498-01**
7/1/2017– 6/30/2020 (Principal Investigator)

Project Title: Role of extracellular vesicles in HIV neuropathogenesis and Opiate abuse. Investigate in the context of cART and opiates, the impact of microglia-derived extracellular vesicles(EVs) on neurons in order to understand the mechanism(s) that underlie HIV-induced neurocognitive impairment/HAND during aviremia. Additionally, a cross-sectional study comparing cerebral spinal fluid(CSF) exNef in people living with HIV/AIDS

(PLWHAs) on cART with a history/current opiate use to their degree of neurocognitive impairment/HAND will be performed. Findings from this proposal will demonstrate the role of EVs in the neuropathogenesis induced by the interplay of opiates and HIV in the CNS.

b. AIDS Clinical Trial Group (Biorepository) Research Grant

12/1/2017 – 12/31/2018 (Principal Investigator)

Project Title: Development of circulating exosomes as theranostics of neurodisease progression in aviremic HIV+. Grant proposal seeks to define a clinical correlate for the exosome proteomic cargo signature and HIV-induced neurocognitive impairment during cART and the potential development of Nef+ exosomes as both an indicator/diagnostic of neurocognitive status in aviremic HIV-infected individuals and novel therapeutic target.

c. The Miami Center for AIDS Research (CFAR) at the University of Miami Miller School of Medicine

9/ 2015 – 6/2017 (Principal Investigator)

Project Title: Nef+ exosomes: Neurotoxin, biomarker, and theranostic of neurocognitive status in HIV disease. Pilot grant examines exNef-mediated effects on primary neurons, cART influence on the incorporation of Nef into exosomes released glia cells infected with HIV, and studies whether exNef is a biomarker for neurocognitive changes in aviremic HIV+ individuals.

2. Completed Research Support

a. Mount Sinai Summer Institute for NeuroAIDS Disparities (MSINaD) Scholar Grant

6/2014 - 8/2016 (Principal Investigator)

Project title: Identification by targeted exome capture of immunogenetic variations in anti-viral pattern recognition receptors that predispose African-Americans to HIV infection and neuroAIDS. The proposal describes identified genetic variations in innate immune receptors associated with anti-viral immunity in African-Americans (AAs) that impact functional antiviral immune responses. Results from this study may indicate that genetic variation in innate immune receptors of AAs impair anti-viral immune responses thereby explaining the disparity of HIV infections among those of African ancestry in the United States.

b. Herbert Wertheim College of Medicine Pilot grant

1/2015 - 12/2016 (Principal Investigator)

Project Title: Exosome incorporation of HIV-1 Nef antigen and drug metabolizing enzymes as biomarkers of HIV disease progression in aviremic cocaine-abusers.

Pilot grant proposal examines cocaine influences on the incorporation of HIV antigens and UGTs* into exosomes released from cells latently infected with HIV and modulates responsiveness to SAHA therapy in aviremic HIV + cocaine abusers on HAART. We hypothesize HIV+ individuals who abused or currently use cocaine will have increased latent viral reservoirs in the CNS (and periphery), have higher levels of HIV antigens in CNS- or plasma-derived exosomes, and reduced responses to SAHA. *UGTs = UDPglucuronyltransferases.

c. Grant # 3R01DA027049-04S1 (Minority Supplement)

9/2012 - 9/2014 Raymond, A.D. (Principal Investigator)

Project Title: Poly drug nanocarrier to treat opiate addiction and HIV disease. This is a supplemental grant to foster minority faculty in research institutions. Examined the effect of HIV infection on exosome protein content and function in the presence of heroin and the feasibility to treat opiate addiction and HIV-induced disease with anti-viral/anti-mu receptor nanocarriers.

d. G12 R03034 NIH/NCRR/RCMI

3/2008 - 5/2010 (Co-investigator)

Sub-project: AIDS Infrastructure and Research Development.

The main goal of this project is to foster development of a major area of research at Morehouse School of Medicine which crosses basic science and clinical disciplines. Primary objectives of this research project are to study the effects of Nef+ exosomes.
